SUMMARY

Developer with experience in web systems and artificial intelligence projects, combining hands-on work with modern technologies (React, Next.js, Node.js) and applied research in machine learning. I work on creating innovative solutions for complex problems, ranging from business management systems to healthcare applications.

PROFESSIONAL EXPERIENCE

Web Developer Intern — Tábula Digital Oct 2023 - Oct 2024

Developed multiple custom websites for different market niches, reducing average delivery time by 20% and achieving high client satisfaction. Applied practical knowledge of technologies such as JavaScript, TypeScript, and PHP, while collaborating in agile teams.

Freight Control System

Development of a high-availability web system for managing freight, payments, and generating customized financial reports, used by a logistics company, factory, and manufacturing unit. The solution reduced analysis time and increased traceability of logistics costs.

Sewing Workshop Management System

Development of a web system for internal management of a textile company, with full control over employee payments, activity records, workforce management, and customized reports for each production stage. The system improved operational control, reduced time consumption, and ensured efficient, high-availability management.

Virtual Catalog and Order System

Development of a web system for viewing a company's virtual catalog, allowing users to select products and place orders directly through the platform. Administrators have access to dashboards, full catalog management, order tracking, and customized reports. The implementation significantly improved workflow efficiency, particularly in order organization and management.

Integrated Textile Production Control System

Development of a complete solution for managing the textile production chain (ERP), covering everything from raw material procurement and outsourced operations (weaving and dyeing) to quality control and sales. The system implemented full batch traceability, automatic calculation of accumulated costs, and strict loss control at each stage, providing management dashboards to support strategic decision-making.

EDUCATION

- 2025.1 - Present
- Master's Degree in Computer Engineering at **University of Pernambuco (UPE)**
- 2021.1 - 2024.2
- Bachelor's Degree in Information Systems at **University of Pernambuco (UPE)**
Final Project: Application of Convolutional Neural Networks for automated detection of pneumonia in chest X-ray images.

TECHNICAL SKILLS

Machine Learning	TensorFlow, PyTorch, Scikit-learn, Matplotlib, Neural Networks, Data Mining and Classification.
Languages and Web	JavaScript, TypeScript, Python, C, PHP, HTML, CSS.
Frameworks and Libraries	React, Next.js, Tailwind, Bootstrap, Vite.
Back-end and APIs	Node.js, Express, REST.
Databases	PostgreSQL, SQL Server, MongoDB.
Tools	Git, Postman, Insomnia.

PUBLICATIONS

Lira, João Victor Mendes de (Mar. 2025). “Aplicações de redes neurais convolucionais para a detecção automatizada de pneumonia através de radiografias torácicas”. In: *Caderno Pedagógico* 22.5. DOI: [10.54033/cadpedv22n5-258](https://doi.org/10.54033/cadpedv22n5-258).

SKILLS

Teamwork:	Collaboration in agile squads at Tábula Digital.
Effective communication:	Business understanding and presentation of results for the Moça Bella Freight Management System.
